Recommendation Letter

Dear Sir,

I am glad to recommend Youssef Ashraf for your program. I have known Youssef since 2017 and during this time he was successful in captivating me. I admired his eagerness to pursue art as his activity for two consecutive years. Perhaps the reason for my admiration toward him is that I did not expect a young man like him to pursue art instead of sports. During his work in this activity, I discovered elaborate features of his personality. First, if he decided to paint a painting he planned to it well. He did not rush to begin drawing it as fast as he can. Instead, he searched for the proper painting techniques for this painting and the best materials to use. I think that this a brilliant reflection of his leadership and good planning skills. Furthermore, he had a great deal of patience. He dealt with any artwork that he pursued as a serious project that can determine his entire future. If he faced difficulty in it, he would not give up it and say that I will go for another piece of work. Thirdly, he did not separate the subjects that he studies from his passion: art. For instance, I gave him the task of drawing a portrait for a famous character: Magdy Yaakoub. He did not employ only the principles of arts he learned. Instead, he asked his mathematics teacher to help him drawing it using the concepts of sketching the functions.

His exceptional abilities intrigued me to discover me about his personality. I assigned me to lead a group of students in drawing a huge portrait. And I insisted that this task must be challenging. After that, I watched him lead his group. His leadership skills captivated me; the success of his group was astonishing. When I asked his teammates about their feedback on him, they responded simultaneously that they felt comfortable in dealing with him. As a result, this piece of art was one of the best ones that I have ever seen.

I think that Youssef will be capable of using these skills to be successful at his major: Computer Science and Mechanical Engineering. He had great potential to be a good leader which is very required in engineering and computer projects. Second, his planning skills are very stunning. He has the capacity of putting several scenarios of his work and how he would deal if any of these scenarios failed. Third, his logic thinking is one of his main characteristics which is very required in engineering and computer. Finally, he has a fantastic ability to craft any project he wants. Conclusively, I strongly recommend Youssef to the AUC.

Sincerely

Galal Khira
